Examples For Setting 54

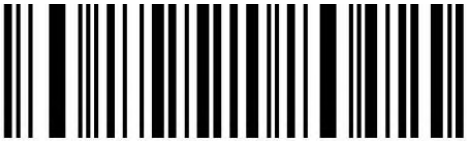
Part I: Wireless Function Setting

Version No.

Scanner version number

Receiver version number
(need to pair scanner with receiver first)

Wireless Function Factory Default Setting



Restore factory default

Note: The * is the factory default.
Note: There has another default setting code for scan module function setting on page 28.

2.4G Mode Pairing

2.4G mode*
(The scanner is paired with the receiver by factory default)

2.4G receiver pairing

Note:
Step 1: Scan ‘2.4G mode’;

Step 2: Scan ‘2.4G receiver pairing’

Bluetooth HID Mode Pairing

Bluetooth HID mode

Note: The scanner will pair with the bluetooth device automatically which is paired before.

Bluetooth HID pairing

Note:

Step 1: Scan ‘Bluetooth HID mode’;

Step 2: Scan ‘Bluetooth HID pairing’

Bluetooth BLE Mode Pairing

Bluetooth BLE mode pairing

Note: Please download or develop low-power Bluetooth BLE transfer software if you need to use this function.

Bluetooth SPP Mode Pairing

Bluetooth SPP mode pairing

Note: Please download or develop low-power Bluetooth SPP transfer software if you need to use this function.

Bluetooth HID Data Upload Speed

Ultra fast

Fast

Middle*

Ultra low

Note:

1. ‘Fast’ mode is recommended for IOS devices
2. For Android devices, please set the speed based on the response speed of the device.
3. Please turn down the speed when the upload content is chaotic or the data is lost.

Show or Hide Bluetooth HID Virtual Keyboard In IOS System

Show or hide the virtual keyboard in IOS system

Scanner Bluetooth Name Setting

Custom Bluetooth name

Note: You need to make a new setting code refer to the sample code, the front part '^&C0C&^' can not be changed, 'XXXX' is the name you need to customize. The max length of the name is 24 bytes.

Note: After changing the name, the Bluetooth HID/SPP/BLE names will be all changed.

ASCII custom Bluetooth name

Setting steps:

1. Scan 'ASCII custom Bluetooth name'
2. Refer to ASCII table on page 20 and scan the parameter codes you need to set as Bluetooth name.
3. Scan 'Save and finish setting' on page 18.

Note: The max length of the name is 24 bytes.

Restore factory default of Bluetooth name

Note: The ' Restore factory default' on page4 also can restore factory default of Bluetooth name.

Check Bluetooth name

Note: the Bluetooth name only can be checked under Bluetooth HID/SPP/BLE modes.

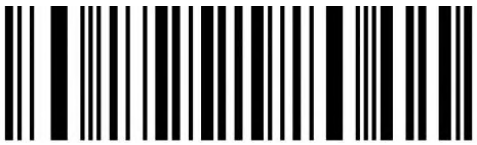
Check Bluetooth address

Note: the Bluetooth address only can be checked under Bluetooth HID/SPP/BLE modes. The Bluetooth address only can be displayed by serial debugging tools.

Data Upload Mode

Immediate mode

Note: The scanned data will be uploaded immediately, and the data will not be saved if the transfer failed.



Inventory mode

Note: The scanned barcodes will be saved automatically, please scan setting codes if you need to view statistical data or upload data.

Automatic storage mode

Note: If the scanner is out of connection distance, the data will be saved automatically. please scan setting code ‘upload all data’ when you need to upload the saved data.

Data Processing In Inventory Mode

Clear all stored data

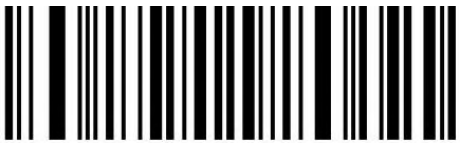
Check number of stored data

Upload all stored data

USB Receiver Interface Type

Setting the USB interface type will change the USB interface type of both the scanner and receiver.

USB-HID*



USB-VCOM

USB-HID Data Output Type

Transfer keyboard function keys

Send ASCII

Keyboard+ASCII mode 1

> 0x1F Send ASCII mode 2

Disable direct output F13-F24 in ASCII mode*

Enable direct output F13-F24 in ASCII mode

Enable ASCII 4 digits output

Number Lock Function

Enable

Disable*

Battery Status

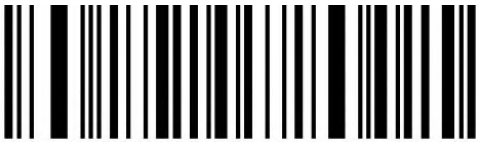
Check battery status

Scanner Volume Setting

Mute

High volume*

Middle volume



Low volume

Scanner Sound Frequency Setting

2048HZ

2700HZ

Base Sound Setting

Mute

Enable base sound

Sleep Time Setting

Disable sleep

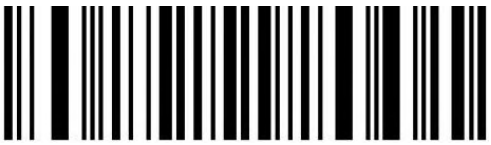
Enter sleep immediately

Enter sleep after 10s

Enter sleep after 30s

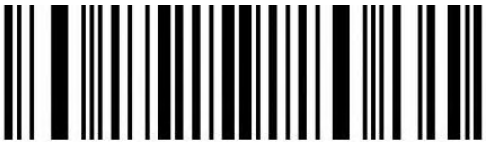
Enter sleep after 1min

Enter sleep after 2mins



Enter sleep after 5mins*

Enter sleep after 10mins



Enter sleep after 30mins

GS Character Replacement

No replacement*

Replace to <GS>

Replace to |

Replace to]

Replace to ^]

Replace to F8

Switch to custom GS replacement

Replace GS to AB

Note: In the setting code, ^&066&^C can not be changed. 2 indicates the number of new replacement characters. The maximum number of characters is 8. AB indicates the custom replacement content. You need to make a new code128 format setting code for custom replacement.

Setting steps for custom GS replacement

Step 1: Switch to custom GS replacement

Step 2: Replace GS to AB

Convert Case

Original data*

All convert to upper case

All convert to lower case

Case Inversion

Keyboard Layouts

English(United States)*

TAB

CR/LF

Hide Characters Setting

Note: for quick settings of hiding the front and back characters, please refer to the appendix(page 19) for details.

Hide the front characters

Note: Scan ‘Hide the front characters’, then scan ‘Save and finish setting’, the hidden front characters will be cleared.

Hide the back characters

Note: Scan ‘Hide the back characters’, then scan ‘Save and finish setting’, the hidden back characters will be cleared.

Save and finish setting

Prefix And Suffix Setting

Note: Scan ‘Add prefix/suffix’, then scan the content to be added (please refer to the ASCII code table in the wireless function part appendix), save and finish setting.

Add prefix

Note: Scan ‘Add prefix’, then scan ‘Save and finish setting’, the added prefix will be cleared.

Add suffix

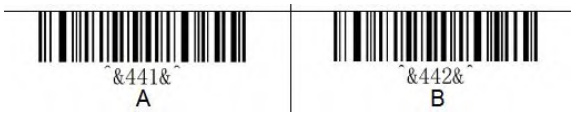
Note: Scan ‘Add suffix’, then scan ‘Save and finish setting’, the added suffix will be cleared.

Save and finish setting

Examples for prefix and suffix setting

Ex. 1: Set AB prefix

1. Scan ‘Add prefix’
2. Scan ASCII data code of [A] [B] in ‘ASCII Data Code Table’(page 22)



3. Scan ‘Save and finish setting’(page 18)

Ex. 2: Set F5 suffix

1. Scan ‘Add suffix’
2. Scan ASCII data code of [F5] in ‘ASCII Data Code Table’(page 22)

3. Scan ‘Save and finish setting’(page 18)

Part II: Scan Module Function Setting

Scan Module Factory Default Setting

Restore factory default

Scan Mode

Manual*

Auto sense

Repeat Barcode Detection

Setting for the interval time of decoding the same barcode, scanner will only decode the same barcode one time if not exceeding the set time.

500ms

750ms*

1s

2s

Center Mode

Scanner only reads the barcode in the center area of the scan window if enabling center mode.

Enable

Disable*

Inverse Color Barcode Reading

Note: Only for 1D/DataMatrix/Aztec codes.

Only read normal codes*

Only read inverse codes

Read both normal & inverse codes

Irregular Barcode Reading

When irregular barcode reading enabled, scanner can be better compatible with some irregular barcodes, but the probability of reading errors will increase.

Disable*

Enable

Overall Setting

Each type of barcode has its own unique features. The settings in this chapter can be used to adjust the scanner to adapt to these feature changes.

The fewer barcode types turned on "Enable Reading", the faster the scanner will read. Disabling some barcode types can improve reading performance.

Examples For Setting

Example of barcode reading length setting

When setting the minimum reading length of a barcode, you need to ensure that the minimum length you set is not longer than the current maximum length setting, otherwise an error will be prompted. Similarly, when setting the maximum reading length of a barcode, you need to ensure that the maximum length you set is not less than the current minimum length setting.

Ex1: Set the reading length of Code128 as 4-12 characters
“Minimum length(0~50bits)”----------Set Reading Length Range For Code 128
“4”----------Data Edit And Setting Parameter Barcodes
“Save”----------Data Edit And Setting Parameter Barcodes
“Maximum length(0~50bits)”----------Set Reading Length Range For Code 128
“1”----------Data Edit And Setting Parameter Barcodes
“2”----------Data Edit And Setting Parameter Barcodes
“Save”----------Data Edit And Setting Parameter Barcodes

Ex2: Set the reading length of Code39 as any characters
“Minimum length(0~50bits)”----------Set Reading Length Range For Code 39
“0”----------Data Edit And Setting Parameter Barcodes
“Save”----------Data Edit And Setting Parameter Barcodes
“Maximum length(0~50bits)”----------Set Reading Length Range For Code 39
“0”----------Data Edit And Setting Parameter Barcodes
